## 8. Agriculture

| Stages  | Technology<br>Readiness<br>Level | Definition   |
|---|----------------------------------|--|
| Ideation  | TRL 1                            | • State the challenge that the industry or other users face, and the need for a new kind of innovation such as variety, practice, or other technology solution   |
|   |                                  | • Estimate the value of the innovative solution compared to the existing variety, practice, or other technologies, and where the solution fits in the overall supply chain.                                    |
| Proof of Principle                                | TRL 2                            | MARKER ASSISTED SELECTION  |
|   |                                  | Collection and analysis of donor genotypes, (screening by natural and artificial inoculation on the hotspots/screen houses) and validation of gene/QTL linked DNA markers for the particular trait of interest |
|   |                                  | TRANSGENICS/ GENE EDITS  |
|   |                                  | Assembling the construct with the gene cassettes of interest, antibiotics markers etc. and its cloning, and standardization of transformation protocol   |
|   |                                  | BIO CONTROL  |
|   |                                  | Isolation, purification and taxonomic identification of microbial samples  |
|   |                                  | TISSUE CULTURE   |
|   |                                  | Selection of superior material followed by culture initiation, media standardization   |
| Proof of Concept<br>demonstrated &<br>established | TRL 3-4                          | MARKER ASSISTED SELECTION  |
|   |                                  | Carrying out the crosses between the donors parents to generate the F1 and their molecular analysis  |
|   |                                  | TRANSGENICS/ GENE EDITS  |
|   |                                  | Generation of putative transformants with the gene of interest, PCR analysis   |
|   |                                  | BIO -CONTROL   |
|   |                                  | Optimization of media for mass multiplication and development of delivery systems for the selected efficient isolates  |
|   |                                  | TISSUE CULTURE   |
|   |                                  | Optimization of media for shoot multiplication and rooting   |
| Late stage research                               | TRL 5                            | MARKER ASSISTED SELECTION  |
|   |                                  | Development of homozygous lines for gene of interest through marker<br>assisted foreground and background selection  |
|   |                                  | TRANSGENICS/ GENE EDITS  |
|   |                                  | Integration and the expression analysis of the trans/cis- gene in the T1 generation  |
|   |                                  | BIO CONTROL  |
|   |                                  | <i>In vitro</i> evaluation and screening of local strains against target pathogens or insects  |

|                           |       | TISSUE CULTURE   |
|---------------------------|-------|--|
|                           |       | Optimization of conditions for hardening and establishment of plants inside greenhouse/ nethouse.  |
|                           |       | MARKER ASSISTED SELECTION  |
| Early stage validation    | TRL 6 | Phenotyping of the stabilized homozygous trait in the green house/ net house/field (hot spots) by putting selection pressure and background genome recovery using molecular markers  |
|                           |       | TRANSGENICS  |
|                           |       | Evaluation of the stable transgenic plants for their ability to express the trait of interest, their integrity and Bioefficacy studies (in the green house)  |
|                           |       | BIO CONTROL  |
|                           |       | Testing bio-efficacy of the formulations against select phytopathogens / insects inside greenhouse/net house, storage and shelf life and stability studies   |
|                           |       | TISSUE CULTURE   |
|                           |       | Establishment of tissue cultured plants in the field for evaluation on a limited scale and genetic fidelity testing  |
| Late stage validation     | TRL 7 | • Conduct extensive field trials (Multi-location or hotspots) or other technology performance experiments to determine the potential yield, product quality  |
| Pre-<br>Commercialization | TRL 8 | • Produce certified planting materials or other kinds of technologies and<br>ensure that these can be sourced or are workable for full-scale<br>production. Also, operational efficiency, costs and returns or resource<br>quality improvements that would result from the innovation are<br>established |
| Commercialization         | TRL 9 | • Commercial-scale production by producers or manufacturers occurs<br>with delivery of products to producers, handlers, processors,<br>distributors, or other supply chain participants to market outlets and for<br>meeting user demand.  |
